About me

I am extremely ambitious and determined to be the best at everything I do, no exceptions. I am looking for a job where I can demonstrate my commitment and ideas, as well as freely develop my knowledge and skills. I would like to know and be able to do as much as possible and have various achievements in many areas. I have no learning limits and I am interested more than enough. I am not a master in one field, but I can often create the best out of nothing. I am also empathetic, helpful, intelligent and smiled. Currently engaged in infrastructure management, automations, software development, technical consultations, research and prototyping.

Skills

I build scripts, automations and applications based on Python, Flask, FastAPI, SQLAlchemy, Selenium and Celery. I am also familiar with Redis, MySQL, MongoDB, Snowflake, PHP, JS, HTML, CSS and other similar technologies. I used and managed many different services like Ubuntu, VPS, OpenLiteSpeed, Sentry, DataDog, Zapier or Slack. I have worked with it equipment for many years, so I know how to use it, but also how to diagnose and configure it. I can cooperate with management, product owners, SEO and sales departments, various analysts and developers. I have an agile spirit and my default state is a flexible approach to work, so everything like Kanban or Scrum.

Biggest challenge accomplished: Built from scratch API application accepting requests, queuing and performing asynchronous tasks requiring the use of virtual browsers, rotating proxy servers and many different data scraping techniques. It also has a cache, firewall and many other custom features. 2300+ requests per day. 580+ commits.
